

Telling a Random Story

ArrayList for Unique Words

Counting Different Words

- Count how many times "the", "green", "dog" and every word occurs in a file
 - Don't know how many different words
 - ArrayList structures: String and Integer
- The k^{th} value of myFreqs is number of occurrences of k^{th} value myWords

"the"	"green"		"dog"		myWords
2	1		3		myFreqs
